## WANT TO SEE OUR LILACS IN BLOOM?

We've always given this information to local customers, but so many people from all parts of the U.S. have dropped in on us from time to time that we think we had better tell **EVERYBODY**. All of our lilacs are grown in and shipped from our nursery, located approximately 50 miles north of Detroit and one mile north of Goodrich, Mich. It is at the corner of State Highway M-15 and Coolidge Road; entrance on Coolidge. If you want to visit us, contact us well in advance and we will let you know when we expect our lilac display to be at its best. After

May 1st send all inquiries direct to Upton Nursery, GOODRICH, Michigan.

### B L U E

### FOLIAR FEEDING?

On the basis of our present experience, this method has its place in modern gardening. We've had excellent results from Monsanto's FOLIUM used on small potted lilacs and young rooted cuttings in hot-beds. Nothing takes the place of humus, and a

lilac bush in

your garden showing signs of malnutrition (yellow streaks on the leaves in midsummer, for instance) needs some good compost worked in around the roots, but as a temporary "pick-me-up" foliar feeding might prove helpful. It also should be of use with young transplants not yet well enough established to get all the good out of the soil. Never apply it or any other fertilizer after about August 1st; late applications stimulate fall growth that does not have time to harden properly and may freeze back during winter. Used as directed, FOLIUM doesn't burn. Obtain from your local garden supply shop; store in a dry place.
